

We realise cost efficiencies and reduce time to market through cloud enabled operation of high transaction platforms. Host on-premise or in our certified European and Asian data centres.

  
KEY  
BENEFITS

- Maximise performance and improve availability for your applications
- Individual solution designed for your needs: private, public and hybrid cloud models
- Direct contact with our experts and 24x7 global support
- Highest security standards for your data management and compliance

**MAXIMISE  
COST  
EFFICIENCIES**

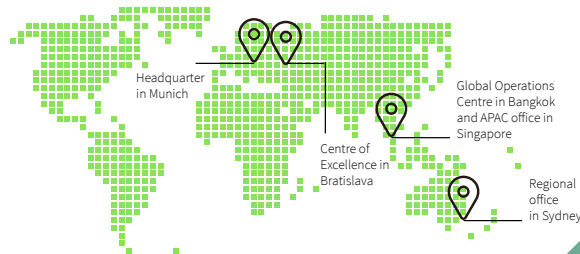

**DRIVING  
DIGITAL  
AGILITY**

**FASTEST  
TIME TO  
MARKET**

  
GLOBAL FOOTPRINT

## OUR TECHNOLOGY PARTNERS

## Global Managed Application Platforms

With our partner VMware we have developed a global platform to run enterprise applications in private and hybrid models.

- High transaction platform for large scale enterprise applications
- Maximise performance through flexible resource models
- Tailored solutions created by our experts for your specific needs
- Reduce latency by up to 80% through our network solutions and data centres in Europe and Asia
- Highest security through enterprise grade security and process certifications (i.e. PCI-DSS for banking industry)

## Open Clouds

In the near future, programming will take place in containers to create solutions that are independent of the underlying infrastructure. OpenStack abstracts the underlying IT infrastructure and enables private, public and hybrid cloud solutions to be used in a flexible way. With our Open Cloud solutions you can benefit today.

- Leverage cost benefits from optimized use of cloud services
- Consolidate your fragmented AWS public cloud service into one single solution
- Drive agility into application development and management
- Become independent of technology and overcome your vendor lock-in

## Big Data Platforms

Are you looking to test big-data concepts and need an efficient, powerful test platform as quickly as possible? Benefit from our experience in managing big data platforms with our partners HPE, Cloudera and IBM.

- Speed up your big data projects especially in large scale environments
- Data security, compliance and data protection is at the heart of our solutions
- Rapid deployment of your project on standard infrastructure in our data centres
- Benefit directly from expert know-how in big data platform operation
